

AMENDMENTS TO THE SPECIFICATION

Page 6, 2nd full paragraph (amended):

The redetachability of a device of the invention may be improved still further by additionally providing spacers, in particular in accordance with DE 196 37 223 (=U.S. 5,928,747). This permits tear-free redetachment even under very high forces acting perpendicularly to the bond plane (e.g., excessive applied pressing force during parting of the adhesive bond).
